PROFESSIONAL SUMMARY

Final-year Computer Science with Artificial Intelligence student at the University of Nottingham, seeking Backend or Machine Learning Engineering roles. Experienced in building scalable cloud microservices (GCP, Docker), deploying custom deep learning models (CNNs, TensorFlow, PyTorch), and delivering software in Agile teams. Internship experience at Infosys; track record of shipping full-stack and ML-powered projects end-to-end.

EDUCATION

University of Nottingham

Expected June 2026

BSc Computer Science with Artificial Intelligence – Predicted 2:1

Beauchamp City Sixth Form

June 2023

A-Levels: Mathematics (A), Computer Science (B), Chemistry (B)

EXPERIENCE

Software Engineer Intern – Infosys

June 2025 – August 2025

- Contributed to Agile sprints on the SAP Cloud Commerce platform, delivering cross-functional features and bug fixes across a large-scale enterprise e-commerce codebase.
- Rewrote onboarding and environment-setup documentation, cutting new-developer ramp-up time and reducing setup-related support requests.

Subject Ambassador – University of Nottingham

September 2023 – Present

- Represent the Computer Science department at open days and applicant events, delivering engaging tours and answering technical questions to prospective students.

PROJECTS

Guitar Music Transcription Tool | Python · PyTorch · Signal Processing

- Designed an end-to-end audio processing pipeline to extract polyphonic note events from raw recordings using lightweight ML models, reducing manual transcription effort.
- Achieved F1 score of 0.833 on pitch detection and 60.3% fretboard exact match accuracy, outperforming the heuristic baseline (49.6%) on the GuitarSet dataset.

Playlist Curator | Java · Docker · Google Cloud Run · Firebase

- Built an Android application with Firebase authentication that uses ML to generate genre-based playlists from a user's existing music library.
- Architected and deployed a containerised Java backend on Google Cloud Run that processes audio metadata through ML classification algorithms.

Enteral Feed Audit System | Python · React · FastAPI

- Building a clinical decision-support prototype for managing blood glucose in hospital inpatients on enteral feeding, adhering to University Hospitals of Leicester protocols and the JBDS 05 guidelines.

JamPal | React · Vite

- Building a browser-based jam partner for beginner guitarists, where adaptive bass and drums follow what the user plays in real time.

AI Meeting Assistant | Python · PostgreSQL · Google Cloud Platform

- Built EngagePro, an AI agent that personalises client engagement using Gemini LLM and semantic search, developed as part of an Infosys x Google Cloud Hackathon.
- Delivered a full-stack MVP in 72 hours: scraped and vectorised company data, implemented pgvector semantic search in PostgreSQL, and integrated Google Calendar for meeting scheduling.

TECHNICAL SKILLS

Languages: Python, Java, C#, JavaScript, HTML, CSS

Machine Learning & AI: TensorFlow, PyTorch, Scikit-learn,

Backend & Cloud: Spring Boot, Google Cloud Platform (GCP), Docker, Cloud Run, Firebase

Databases: PostgreSQL (pgvector), Firebase Realtime Database
